Duluth, GA 30096

To whom it may concern,

I am very interested in a software development position at your company! This position fits perfectly with my education, experience, and career interests.

My qualifications include successful completion of a Bachelor of Science degree that incorporated courses with aspects of front end/back end web development, mobile app development, information security, computer networking, and learning about computer hardware such as routers, servers, printers, cameras, etc. These experiences have bestowed on me a passion for problem solving and creating innovative solutions to complex problems. I have personally completed and contributed to a myriad of projects in my undergrad that have greatly strengthened my teamwork skills and resourcefulness. I'm currently working at Ted's Montana Grill in Peachtree Corners as a server, and have been there for 7 years, so I have strong customer service skills and I fully embrace company culture. While working there I obtained my degree in information technology that granted me proficiency with core web languages, CSS and JavaScript frameworks/libraries, developing applications within an object-oriented paradigm, Java, and UNIX.

I am eager to demonstrate my strong work ethic as I begin a career in information technology. My qualifications and career goals will work in tandem with your company goals and project requirements. As you review my resume I hope you agree. I would also like to thank you for reading this and would love to hear from you soon to schedule an interview.

Sincerely,

Nate Sims
